

TOP-QUALITY WATER STARTS AT THE FLOOR.

Installing a Hayward® main drain means cleaner water with simpler maintenance.

WHY INSTALL A MAIN DRAIN?

- » Allows water to be pulled from both the top and bottom of the pool for better overall circulation than a return and skimmer alone
- » Cleaner water promotes ideal chemical and heat distribution across all areas of the pool
- » Reduces the need for frequent vacuuming/cleaning
- » Simplifies winterization by making it easier to lower the water level

THE HAYWARD MAIN DRAIN DIFFERENCE

- » Suitable for a variety of above-ground and in-ground pool surfaces including vinyl, fiberglass and concrete
- » Both round and square options available to suit any pool
- » All Hayward main drains and replacement covers are safety-approved
 - » VGB/anti-entrapment compliant
 - » Tested to ASME A1129.8b-2009 and ANSI/APSP-16 standards
 - » CPSC compliant

For more info and to start exploring your main drain options, contact your pool builder, dealer or Hayward sales representative.
